

# Alma Just In Time SAML provisioning

<https://github.com/WRLC/AlmaSAMLJIT>

## AlmaSAMLJIT

Alma SAML Just-In-Time user provisioning configuration

XSL Transformation scripts for JIT SAML provisioning of user accounts

## Testing and development

Here is a good basic introduction to XSLT: [https://www.w3schools.com/xml/xsl\\_intro.asp](https://www.w3schools.com/xml/xsl_intro.asp)

You can get the SAML response from the IdP using a URL like this (eg. HOW IZ):

[https://wrlc-hu.alma.exlibrisgroup.com/mng/login?auth=SAML&idpCode=HUAzSSO&test\\_mode=true](https://wrlc-hu.alma.exlibrisgroup.com/mng/login?auth=SAML&idpCode=HUAzSSO&test_mode=true)

The URL can be generated by the Test button on the SAML Integration Profile Actions page.

Once you have that SAML response in an XML file, test your transformation like so:

```
xsltproc HUalmauser.xsl SAMLresponse.xml | xmllint --format -
```

## Installing XSL Transformation scripts

To configure SAML JIT user provisioning, go to the SAML profile in Alma **Configuration > General > Integration Profiles**. In the **Self Registration** section (at the bottom) select the *Active* radio button and the *Update user upon login* checkbox to enable JIT provisioning.

Click the folder icon button next to *XSL configuration file*, Open your XSLT file and click Save to install the XSLT script.

In the same way you can install an updated XSLT script when it says a file exists. For example, Howard's JIT configuration has to be updated every year (usually the first week or two of August) to update the hard-coded Expiry and Purge dates for another year out (eg. 2026 -> 2027).
